WESTERN FOREST INSECT CONFERENCE
Minutes of Initial Meeting
Portland, Oregon 1
December 7, 1949

A steering committee made up of Mr. Hector A. Richmond, Victoria, B.C (chairman), Mr. F. P. Keen, Berkeley, California (for Mr. Robert L. Furniss, Portland, Oregon), and Mr. James C. Evenden, Coeur d’Alene, Idaho called the meeting to order at 7:30 p.m. in the committee room, office of the Pacific Northwest Region, U.S. Forest Service, Post Office Building. The following persons were present:

J. W. BONGBERG, Entomologist
USDA Forest Insect Laboratory
29 Forestry Bldg., U. Calif.
Berkeley 4, California

W. J. BUCKHORN
Scientific Aid USDA
Forest Insect Laboratory
445 U.S. Court House
Portland 5, Oregon

WILLIAM K. COULTER Entomologist
USDA Forest Insect Laboratory
445 U.S Court House
Portland 5, Oregon

JAMES C. EVENDEN Entomologist In Charge
USDA, Forest Insect Laboratory
Box 630 Federal Bldg.
Coeur d’Alene, Idaho

RALPH C. HALL, Entomologist
USDA. Forest Insect Laboratory
29 Forestry Bldg., U. Calif.
Berkeley 4, California

A.J. JAENICKE, Forester
US Forest Service
Box 24137
Portland, Oregon

PHILIP C. JOHNSON, Entomologist
USDA Forest Insect Laboratory
Box 630, Federal Bldg.
Coeur d’Alene, Idaho

D.E. PARKER, Assistant Division Leader
USDA Division of Forest Insect Investigations
Beltsville, Maryland

W.L. POPHAM, Assistant Chief
USDA, Bureau of Entomology and Plant Quarantine
Washington, D. C.

HECTOR A. RICHMOND, Officer In Charge
Dominion Entomological Laboratory
311 Post Office Bldg.
Victoria, B. C. Canada

GEORGE R. STRUBLE Entomologist
USDA Forest Insect Laboratory
29 Forestry Bldg., U. Calif.
Berkeley 4, California

J. F. WEAR, Airplane Pilot
USDA Forest Insect Laboratory
445 U. S. Court House
Portland 5, Oregon

J. M. WHITESIDE, Entomologist
USDA, Forest Insect Laboratory
445 U. S. Court House
Portland 5, Oregon
Mr. Keen and Mr. Jaenicke were asked to serve as temporary chairman and secretary, respectively.

The proposed Constitution prepared by the steering committee was read and, after several minor revisions, it was approved as herewith attached.

Some discussion followed as to the form the Conference might assume under the limitations of the Constitution. It was generally agreed that more benefits to the members might accrue from an informal type of organization. It was suggested that the meetings, and specifically the annual meetings, be held in the form of work (emphasis added by MMF) conferences.

The following officers were elected for the coming year:

**Chairman:** Mr. Hector A. Richmond, Victoria, B.C.

**Secretary-Treasurer:** Mr. Philip C. Johnson, Coeur d'Alene, Idaho

**Executive Committee Members:**

1 Year: Mr. A. J. Jaenicke, Portland, Oregon

2 Years: Mr. George Hopping, Calgary, Alberta

3 Years: Mr. L. W. Orr, Ogden, Utah

Mr. Richmond asked for opinions on the location of the 1950 annual meeting of the Conference. Dr. Wygant suggested Denver, Colorado, inasmuch as the meeting then could be held in conjunction with the annual meeting of the American Association of Economic Entomologists.

Approval was given to Mr. Richmond's suggestion that an effort be made by the officers to contact all western Canadian and American forest entomologists and those interested in the technical aspects of forest entomology to acquaint them with the Conference and to extend an invitation to join.

Following those matters of business a roundtable discussion was held on the spruce budworm (Choristoneura fumiferana (Clem.) problem in the western provinces and states of Canada and the United States respectively. The budworm infestations now present in many Douglas fir forests have
been unusually severe and widespread during the past few years and extensive aerial spraying is planned in 1950 for its control in parts of Oregon, Washington, and Montana.

The whole-hearted discussion by those working on some phase of the problem brought out many extremely pertinent facts pertaining to (1) variations in the budworm life history, (2) habits of the overwintering initial instar caterpillars, (3) population density determination, (4) the mode of buildup and spread of outbreaks, (5) budworm survey procedures, (6) applied control methods, and (7) the effects of parasites and wilt disease.

Dr. Wygant then gave a brief and interesting account of the spruce bark beetle (Dendroctonus engelmanni Hopk.) epidemic that has flourished in Colorado since 1939. The beetle has thus far killed 5 billion board feet of Engelmann spruce and now threatens the killing of an additional 6 billion feet unless the infestation is curbed. The control program now contemplated plans to treat 700,000 trees on some 35,000 acres by means of bark penetrating oil insecticides. Interesting facts concerning the life history and habits of the beetle, the epidemiology of the current outbreak, and the development of control methods were discussed by Dr. Wygant.

The meeting was adjourned at 11:00 p.m.

/s Philip C, Johnson
Secretary-Treasurer

1 PCJ: This resume of the meeting is based upon notes made by Mr. A.J. Jaenicke
